Jeet Sarkar

JEET SARKAR

Aspiring Software Developer | Web & Backend Enthusiast

Education

Techno International New Town

Bachelor of Technology in Computer Science and Engineering (B.Tech CSE)

Professional Summary

Motivated Computer Science undergraduate with hands-on experience in backend engineering, API integration, and full-stack development. Experienced in building real-world applications featuring seamless client-server communication, automated workflows, and robust data processing pipelines. Passionate about solving complex architectural problems, with a strong drive to master large-scale system design and transition into AI engineering and MLOps.

Technical Skills

Programming Languages: C, C++, Java, Python, JavaScript, C#, TypeScript

Frontend: React.js, Vite, HTML5, CSS3, Tailwind CSS, Framer Motion

Backend & APIs: FastAPI, Node.js, Express.js, Flask, REST APIs, Firebase Auth

Databases: Firebase Firestore, MySQL, MongoDB

Tools: Git, GitHub, Docker, Postman, MongoDB Compass

Libraries & Tools: Git, GitHub, Postman, OpenCV, MediaPipe, n8n, Capacitor

Projects

SentinelAI (Deepfake Detection Platform)

Tech: React.js, Vite, Tailwind CSS, FastAPI, n8n, Python, OpenCV

- Developed a comprehensive full-stack platform for detecting deepfake media, achieving an accuracy rate of 80–85% for images and 80% for videos.
- Engineered backend endpoints and interfaced with the core AI model to support a live frame-by-frame analysis feature, successfully flagging and visually highlighting specific frames responsible for deepfake classification.
- Built a highly responsive, minimalist frontend using React.js and Framer Motion to display real-time analysis metrics smoothly.
- Implemented automated data ingestion pipelines using n8n workflows and social media scraping to streamline media processing.

Student Discount Finder

Tech: React.js, JavaScript, APIs

- Built a web application that helps students discover available discounts and offers from multiple platforms in a single interface.
- Developed the frontend using React.js, implemented API-based data fetching, and managed component state for dynamic content rendering.
- Focused on clean UI, responsive design, and usability while strengthening skills in frontend architecture and real-world API integration.

SupVision

Tech: Backend APIs, Database Concepts, HTTP Requests

- Worked on a digital attendance and verification system aimed at automating traditional attendance processes.
- Contributed to backend request handling using GET and POST methods, implemented data validation and error-handling logic, and gained practical experience with database interaction.

Experience & Practical Learning

Hands-on experience in full-stack and backend development through real-world projects. Worked with authentication systems, automated workflows, cloud deployment fundamentals, and applied DSA fundamentals in problem-solving.
